Lab 1
'About Me' Web Page

Instructions:

- Create a file called **index.html** in your code editor.
- Save your file to a folder which follows good naming conventions - *no uppercase letters, spaces or special characters in the folder name*.
- Add all of the necessary HTML components to your document (doctype, head, body, character encoding and title).
- In the <body></body> element of your HTML document, include the following:
    - An <h1></h1> element containing your name
    - A <p></p> element containing a small blurb about you.
- Open index.html in a browser and view the result. This is a legitimate, valid web page!
- Add a <main>, <header> and <footer> to the page - place your page content within these elements according to their role.
    - Introductory content - header
    - Main content - main
    - Additional Info to help give context to the page (maybe copyright? Author?) - footer
- Compress/zip your folder.
- Submit the zip folder to BlackBoard under Lab 1

Evaluation:

Lab is completed and submitted by the end of the day = complete (1%)

Labs are graded on a complete/incomplete basis and are each worth 1% of your final grade.
